

ProCut CNC Machining Services Ltd

High Volume Cutting & Routing

Tel 01702 299540 sales@ProCutuk.co.uk www.ProCutuk.co.uk

ProCut specialise in high volume cutting and routing.....

How...

Above is one of our Multihead routers and the work is shown been clamped, these walking clamps are integrated in to the CNC's software that enables us to stack sheet material and with two routing heads can produce 10 parts in the same time as a conventional single head router makes one! Pretty handy when doing peg boards or any sheet job that lends itself to this process.

The Axxioms are complimented by.....

Schelling 3.1m Beam Saw.

ProCut utilise The Schelling Automatic 3m Beam Saw to make short work of any cutting job, with its Automatic rotating air bed allows for fast scratch

Shoda 4 Head Router.

ProCut bring out the Shoda 4 head router for those job's that can't be stacked and with 4 piggy backed drilling heads makes short work of any

free cutting.

routing job.

Also in ProCut's arsenal to compliment the Axxioms is their dedicated Shelling RADIUSING machine believed to be the only one in the UK, and makes very short work of those panels that require radiused corners. Unlike others, ProCut can produce panels with radiused corners without the more expensive routing method, which can make a £3 routed panel less than a pound.

So why not call or email today, and see how much time and money you could save!
